

AGENT Whitepaper

Version 1.0 · October 2026
Community-founded AI project · built with AI
Official site: <https://agent7.io>

1. Executive summary

AGENT is a coordinated AI ecosystem with seven specialized agent roles. The **AGENT token** (ERC-20 on Ethereum) is the payment medium agents use to settle user-requested work — for APIs, tools, data, digital services, and other AI agents.

Principle: Users hold AGENT in their own wallets and authorize every payment.

Split: 99% to the service provider, **1%** to the protocol treasury.

Supply: 1,000,000,000 AGENT, fixed — no further minting, no burning.

AGENT combines **community fairness** (clear utility, transparent allocation, public communication) with an **investor-ready setup** (fixed supply, liquidity path, exchange listing path, growing real demand through product use). This is not a return guarantee — value comes from utility and adoption.

2. Problem

AI is powerful, but work stays fragmented: goals, research, creation, execution, and oversight live in separate tools. Clear, authorized payment paths are often missing when agents trigger paid services.

AGENT addresses both: **role coordination** for outcomes, and **AGENT** as transparent settlement for paid work.

3. Solution

3.1 Seven agents

Strategist, Researcher, Creator, Operator, Guardian, Developer, and Growth collaborate toward a shared goal — with human approval for high-impact steps.

3.2 AGENT payments

1. User submits a request
2. An AI agent identifies the paid service
3. User authorizes payment from their own wallet
4. Provider receives **99%**
5. Protocol treasury receives **1%**

Costs stay explicit, authorized, and attributable to the request.

4. Tokenomics

Parameter	Value
Name / Symbol	AGENT
Blockchain	Ethereum

Standard	ERC-20
Total supply	1,000,000,000
Minting	None (fixed supply)
Burning	None
Pre-sale	0.05 USDT / AGENT · 50M · from 1 Dec 2026 (Europe/Berlin)
Public sale	0.15 USDT / AGENT · 150M · from 1 Mar 2027 (Europe/Berlin)
Protocol fee	1% per completed payment
Provider share	99%
Quest airdrops	20M AGENT
Referral pool	30M AGENT (5% of purchase amount to referrer)

4.1 Allocation

Allocation	Share	Amount
Ecosystem & developers	25%	250M
Treasury & product development	20%	200M
Pre-sale (0.05 USDT)	5%	50M
Public sale (0.15 USDT)	15%	150M
Team & founders	15%	150M
Strategic investors	5%	50M
Exchange & DEX liquidity	10%	100M
Partnerships & user incentives	5%	50M (30M referral · 20M quest airdrops)
Total	100%	1B

Reading: Large ecosystem/treasury share for building and community; **20% sale tranche** (5% pre + 15% public) for open access; only **5%** strategic investors; liquidity and team with clear quotas — community-first and planned.

4.2 Use of the 1% fee

The protocol fee is **reinvested**, not distributed as yield. Intended uses:

- **Development** — product, agent orchestration, integrations, security
- **Infrastructure** — operations, APIs, tooling, monitoring
- **Marketing & community** — reach, education, partners
- **Liquidity / operating reserve** — ecosystem stability (no speculative yield promise)

Every use feeds back into what makes AGENT stronger.

4.3 Access and listing

- **Pre-sale:** from **1 Dec 2026** at **0.05 USDT / AGENT** on the official website
- **Public sale:** from **1 Mar 2027** at **0.15 USDT / AGENT** on the official website
- **DEX liquidity:** from the liquidity tranche
- **Exchange listing:** CEX/DEX path; announcements only via official channels

Official contract addresses appear only through AGENT channels (see <https://agent7.io> and Etherscan).

Mainnet AGENT token: `0x2A97aFCab96fF11a3c3ee2ac5CF3B4B922865c04`

5. Community & investors

Community-friendly

- Utility first: token for real agent payments
- Transparent allocation and public sale communication
- Users keep control of wallet and approvals
- Ecosystem and incentive pools for builders and early users

Investor-ready (no guarantee)

- Fixed supply — no inflationary reminting
- Clear buckets including liquidity and listing path
- Fee model that funds development and growth
- Product roadmap with measurable 2027 milestones

AGENT does not promise prices, dividends, or guaranteed returns. Interest comes from utility, liquidity, and network growth.

6. Roadmap

Pre-sale from 1 Dec 2026 · Public sale from 1 Mar 2027 · then build-out through 2027 toward listing and Product Live.

Q1 2027 — Launch Foundation (Jan–Mar)

- Community pre-sale live from 1 Dec 2026 at 0.05 USDT / AGENT (50M) on the official site
- Public sale from 1 Mar 2027 at 0.15 USDT / AGENT (150M) on the official site
- DEX liquidity activated
- Community channels and transparent token communication
- Core product: deepen orchestration of the seven roles

Q2 2027 — Multi-Network Agents (Apr–Jun)

- Agents work across networks and service providers
- Extended workflows (everyday and business automation)
- Partner integrations and developer extensions
- Listing readiness (documentation, liquidity, compliance checks)

Q3 2027 — Listing & Scale (Jul–Sep)

- Exchange listing (communication only via official channels)
- Expand liquidity, partners, and incentives
- Listing documentation and compliance completed
- Prepare Product Live (payment stack, integrations)

Q4 2027 — Product Live (Oct–Dec)

- AGENT payments in the product flow (authorization from user wallet)
 - First paid integrations (APIs / tools / services)
 - Builder and incentive programs from ecosystem/incentive pools
 - Security and ops hardening; stable production across networks
 - Outlook 2028+: further networks, agent marketplace, protocol extensions
-

7. Governance

AGENT is community-founded. **Treasury and major releases** run via **multisig**; product and roadmap via the builder team with public community feedback. Sale and listings only via the official website and confirmed channels.

The community participates from day one (feedback, builder and incentive programs). Formal voting and DAO elements follow once product and token use are stable — step by step.

8. Closing

AGENT brings coordinated AI and a clear payment medium together: **the community builds and uses, investors see a coherent utility and liquidity design**, and **1% flows back into development, marketing, and infrastructure**.

After the pre-sale from **1 Dec 2026** and the public sale from **1 Mar 2027**, the build-out phase continues toward multi-network agents, exchange listing, and Product Live — then further extensions.

Official source for sale, contract, and listings: <https://agent7.io> and confirmed community channels.
